

SAP on VMware HealthCheck Service

The SAP on VMware HealthCheck service analyzes and reviews your SAP architecture and design in conjunction with your VMware infrastructure environment for compliance with SAP on VMware best practices and recommendations. This assessment is performed by a team of VMware Certified Professionals (VCP) who are also senior level SAP certified Basis consultants, each with over 10 years experience with SAP.

The resulting HealthCheck report documents the findings of the assessment and is intended to:

- Document the scope of the assessed systems
- Help gauge how well the virtual infrastructure is configured and used relative to SAP on VMware best practices, and identify areas needing attention and/or remediation
- Provide recommendations to configuration and use relating to SAP on VMware best practices
- Serve as a reference to review best practices and issues discussed during the assessment

Key Benefits

- Validation of SAP on VMware best practices
- Quality Checkup
- Best Practices Reference
- Supportability by SAP and VMware
- Increases success for implementing SAP on VMware
- Knowledge Transfer
