One Implementation, Unlimited Deployments

Texperts' vImplementor is a revolutionary service tool that encapsulates and preserves an entire SAP implementation. Utilizing VMware® virtualization, vImplementor allows SAP System Integrators to work through the implementation cycle only once, then reuse and deploy multiple SAP implementations off of the same preserved implementation. There is a wide range of SAP configurations that can be preserved and each successive deployment is guaranteed to be exact and instantaneous. Furthermore, vImplementor is hardware independent and works with single SAP systems or completely integrated SAP Landscapes, giving SAP System Integrator firms a consistent deployment solution no matter who the client may be. This service drastically reduces implementation and QA costs, expedites deployment — sometimes weeks instead of months or years — and provides a standardized solution that can be reused for a limitless number of SAP clients.

How it Works

vImplementor

Highlights

- Industry-specific, turn-key SAP implementation with version control
- Implement once then deploy to many SAP Clients
- For single SAP systems or completely integrated SAP Landscapes
- Reduced implementation costs
- Reduced implementation time
- Reduced ongoing operational costs
- Minimize the amount of QA
- Faster-to-market
- Hardware-independent through encapsulation
- Simulated Go-Live with rollback capability
- Hosted or Non-Hosted

"Texperts leveraged VMware virtualization to innovate in the SAP solution implementation industry in ways that weren't possible a few years ago. Their vImplementor service tool is definitely ahead of the curve."
