vUpgrade

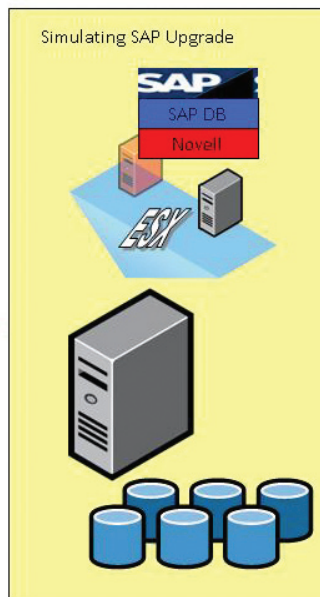

Know Exactly What to Expect Before you Upgrade

Texperts' service tool, vUpgrade, uses a virtual copy of a client SAP® system. The vUpgrade system is outsourced, allowing the customer to execute simulated upgrades to help identify potential pitfalls, timings and important modifications of SAP objects. The hosted system is completely isolated from the production landscape, thus the upgrade tests can be performed at any time before the actual upgrade, providing enormous flexibility and ensuring business continuity.

SAP Customer – Native SAP

SAP Migration

Texperts Data Center – Virtual SAP

The virtual SAP system(s) can then be used after upgrade for other purposes like further development, testing or end-user training. This leads to a reduced-cost model, especially as it does not require additional hardware resources in your data center.

A flat monthly fee enables cost control after the initial setup. Texperts recommends a platform combination of SAP running on MaxDB/Novell Suse Linux Enterprise Server as a cost-effective stack for this service. Other platform combinations are available on request.

Key Benefits

- Identify pitfalls, timings and modification requirements ahead of actual upgrade
- Accelerate upgrade with turn-key transports
- Test independent of your actual SAP landscape and your internal procurement process
- End-user training before the upgrade
- Develop new functionality ahead of the upgrade
- Virtual integration of all parties via Secure Access Infrastructure
- This service is available through the Texperts Private Cloud.

“Texperts helped us create a duplicate SAP landscape inexpensively, guided us through the upgrade process using the exact conditions we would encounter, and provided direction and support through Go-Live.”
