Know Exactly What to Expect Before you Upgrade

Texperts' cloud service vUpgrade, uses a virtual copy of a client SAP® system. The vUpgrade system is outsourced, allowing the customer to execute simulated upgrades to help identify potential pitfalls, timings and important modifications of SAP objects. The hosted system is completely isolated from the production landscape, thus the upgrade tests can be performed at any time before the actual upgrade, providing enormous flexibility and ensuring business continuity.

The virtual SAP system(s) can then be used after upgrade for other purposes like further development, testing or end-user training. This leads to a reduced-cost model, especially as it does not require additional hardware resources in your data center.

A flat monthly fee enables cost control after the initial setup. Texperts recommends a platform combination of SAP running on MaxDB/Novell Suse Linux Enterprise Server (SLES) as a cost-effective stack for this service.

Other platform combinations are available on request.

vUpgradeSM

Key Benefits

- Month-to-month subscription contract to keep costs controlled and predictable through flexible Pay-as-you-Go payment options (OpEx only)
- Rehearse the SAP Upgrade and identify pitfalls, timings and modification requirements ahead of actual upgrade
- Shorten the timeline and reduce cost for an SAP Upgrade project
- Develop and Test new functionality independent of your production SAP landscape
- Train end-user before the SAP Upgrade project
- Self-service 7x24
- Integrate all participating parties e.g. your ABAP team, SAP Support, 3rd-party consulting partners etc. required for an SAP Upgrade project via our secure cloud portal
- Zero footprint in your data center
- No internal procurement, deployment or provisioning necessary
- This service is provided through a dedicated private cloud by Texperts

" Texperts helped us create a duplicate SAP landscape inexpensively, guided us through the upgrade process using the exact conditions we would encounter, and provided direction and support through Go-Live."
